

Colonial First State Wholesale Equity Income Fund

Monthly Factsheet

31 October 2020

Portfolio Description

The Fund invests in a broad selection of Australian listed companies, regardless of each stock's dividend yield, and extends the insights of fundamental research with an active options strategy to provide a smoother return profile than the broader share market and a higher income stream over the long term.

Investment Strategy

The Fund's returns are generated from a number of sources, including dividends, franking credits and capital returns from Australian shares, as well as option premium income. The Fund uses derivatives to modify the return profile of its Australian share holdings. The use of equity options in conjunction with Australian shares is expected to result in a greater proportion of the total return delivered as income and reduced volatility in returns. In the selection of Australian shares, investment opportunities are identified by detailed fundamental research, including a high number of company visits and utilising a proprietary database to analyse company financials. The Fund predominantly invests in Australian dollar denominated securities and therefore does not hedge currency risk.

Investment Objective

To provide a total return comprised of regular income, franking credits and some capital growth from Australian shares over the long term, delivered with consistently lower volatility than the S&P/ASX 100 Accumulation Index. The Fund aims to deliver risk-adjusted returns that exceed the S&P/ASX 100 Accumulation Index before fees and taxes over a full market cycle.
